

MEYLE-PD: Advanced performance and design.

Cabin air filter: the final step for cleaner air!

Improved air flow

- Significantly increased filter efficiency for fine dust with a lower pressure loss leading to improved air flow compared to OE

Permanent NO_x reduction

- Only MEYLE-PD cabin air filters permanently reduce NO_x in the environment by binding it in the filter material as salt and never releasing it again – not even while waste incineration

Ultra clean cabin air

- MEYLE-PD cabin air filters take the next step in drivers' health by being enriched with special impregnated active carbon and high-class filter media, leading to extra high chemical binding of NO_x and enhanced separation of fine dust - better than OE

MEYLE-PD advantage:

- On top of the usual active carbon cabin filter properties, MEYLE-PD filters score with enhanced separation of fine dust and chemical binding of NO_x
